

Eliminate duplicates within Excel

Making your customer data
fit for business use

Dedupe4Excel is an add-in for MS Excel™, which identifies and manages duplicate rows and searches across grouped fields as specified by the user to find and remove duplicate data from MS Excel™.

A duplicate free Excel™ database is a vital and valuable business asset

Eradicating non identical contact duplicates in your Microsoft Excel™ database is necessary to ensure effective and targeted communications.

With duplicate free data you save money, prevent wasted mailings, protect your brand, and deliver a single, trusted source of contact information for all users.

A quick way to banish unnecessary duplicates

Dedupe4Excel™ is a powerful add-in for Microsoft Excel™, alleviating the long and painful process of removing misaligned and duplicate data for small or large data sets.

It banishes errors in an instant, improving and maintaining the all-round health of your contact records simply and efficiently.

Easy to use interface

An intuitive user interface with a simple set up ensures that users of all proficiencies are able to install and operate the Excel add in.

Create output worksheets

- Matching record comparisons
